

Validation of Matrix Heating Uniformity in UAVOS Composite Curing Oven

**Program:
Standard**

**Set Temperature:
100 C°**

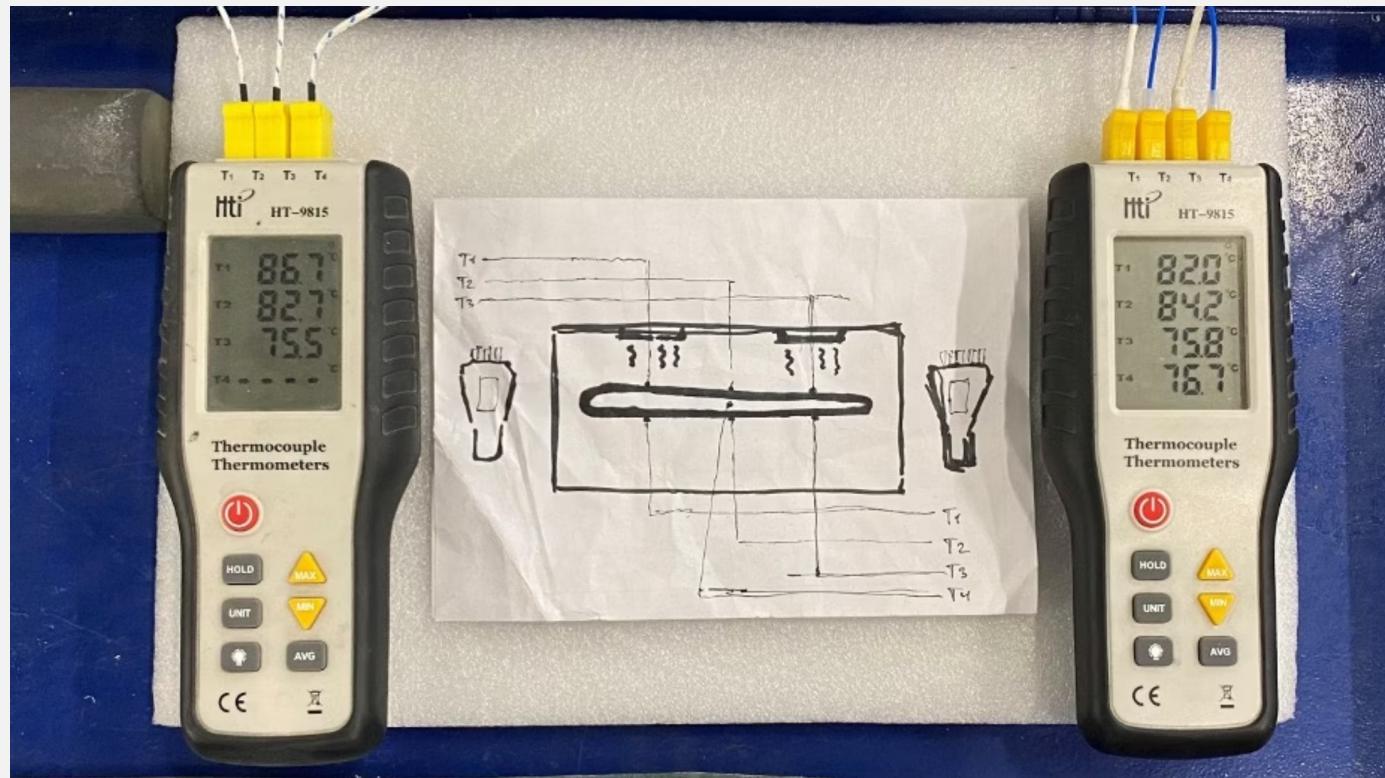

**Set Time:
300 minutes**

**Matrix placement in
chamber:
centered at heater level**

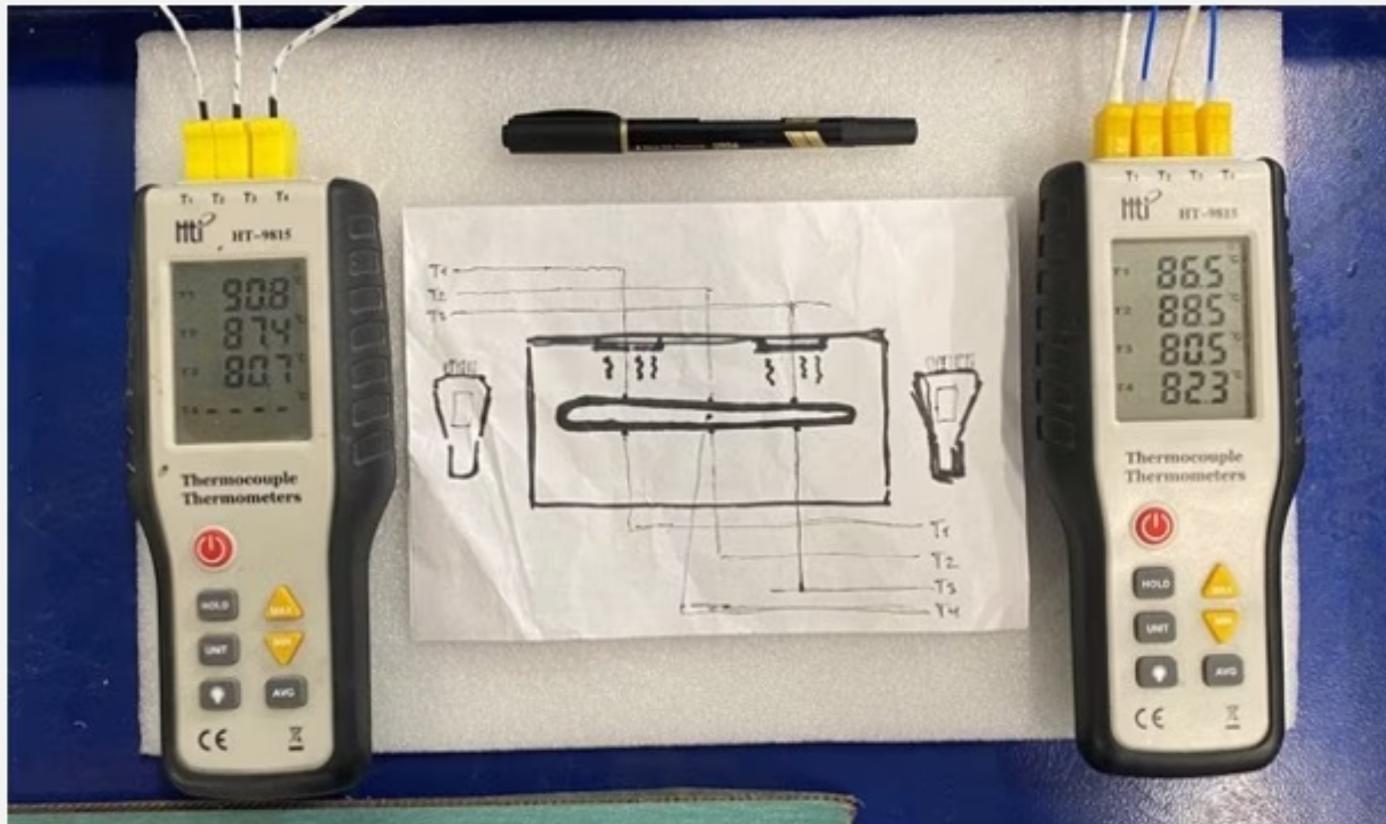

Temperature measurement intervals

Temperature sensor readings after 20 minutes

Temperature sensor readings after 30 minutes

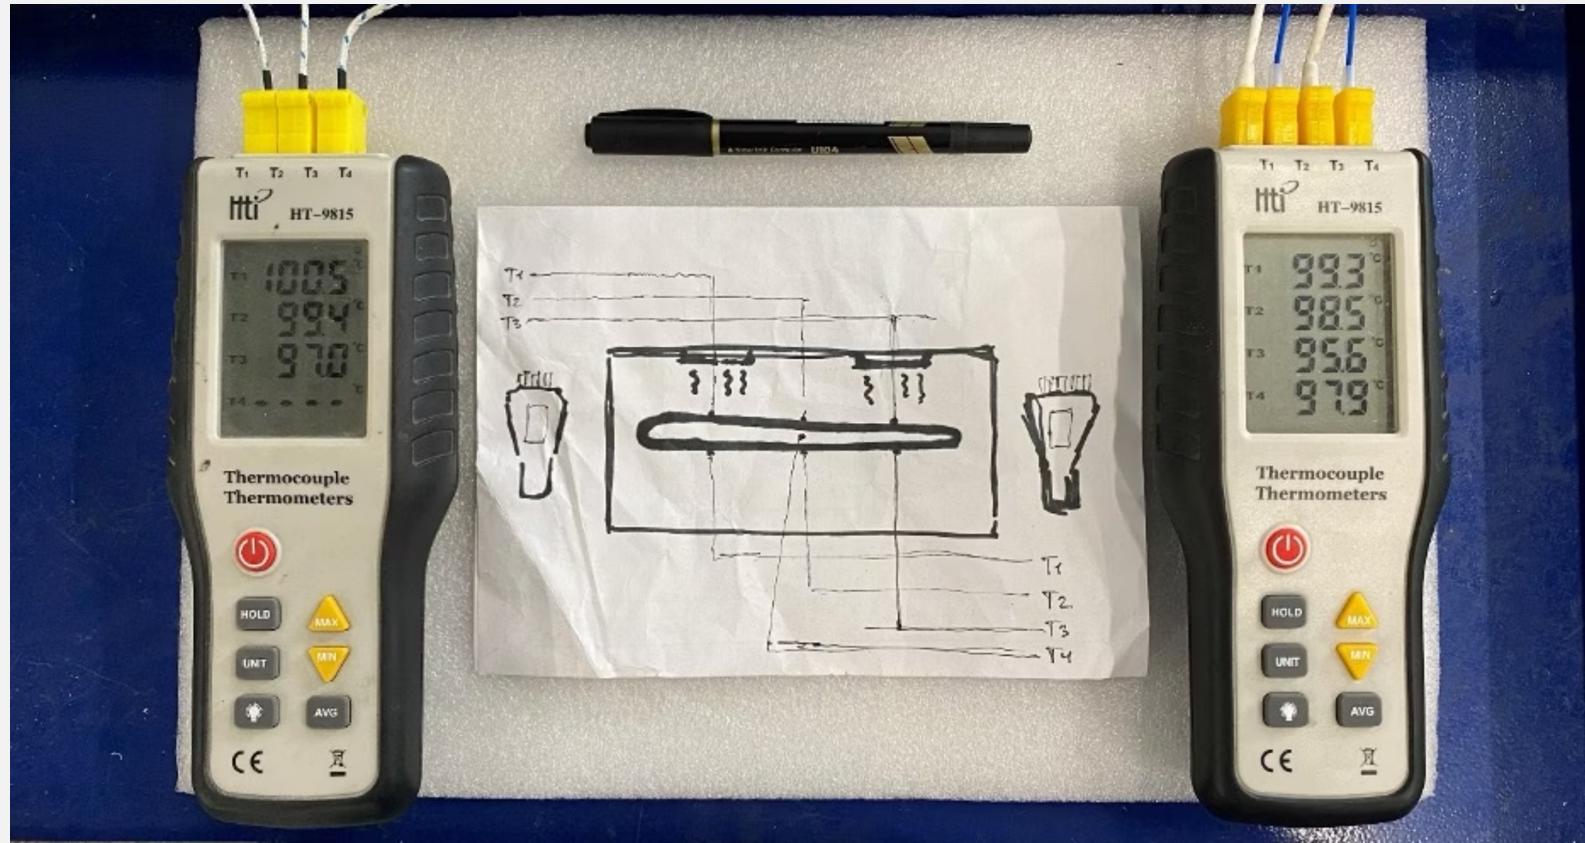

Temperature sensor readings after 40 minutes

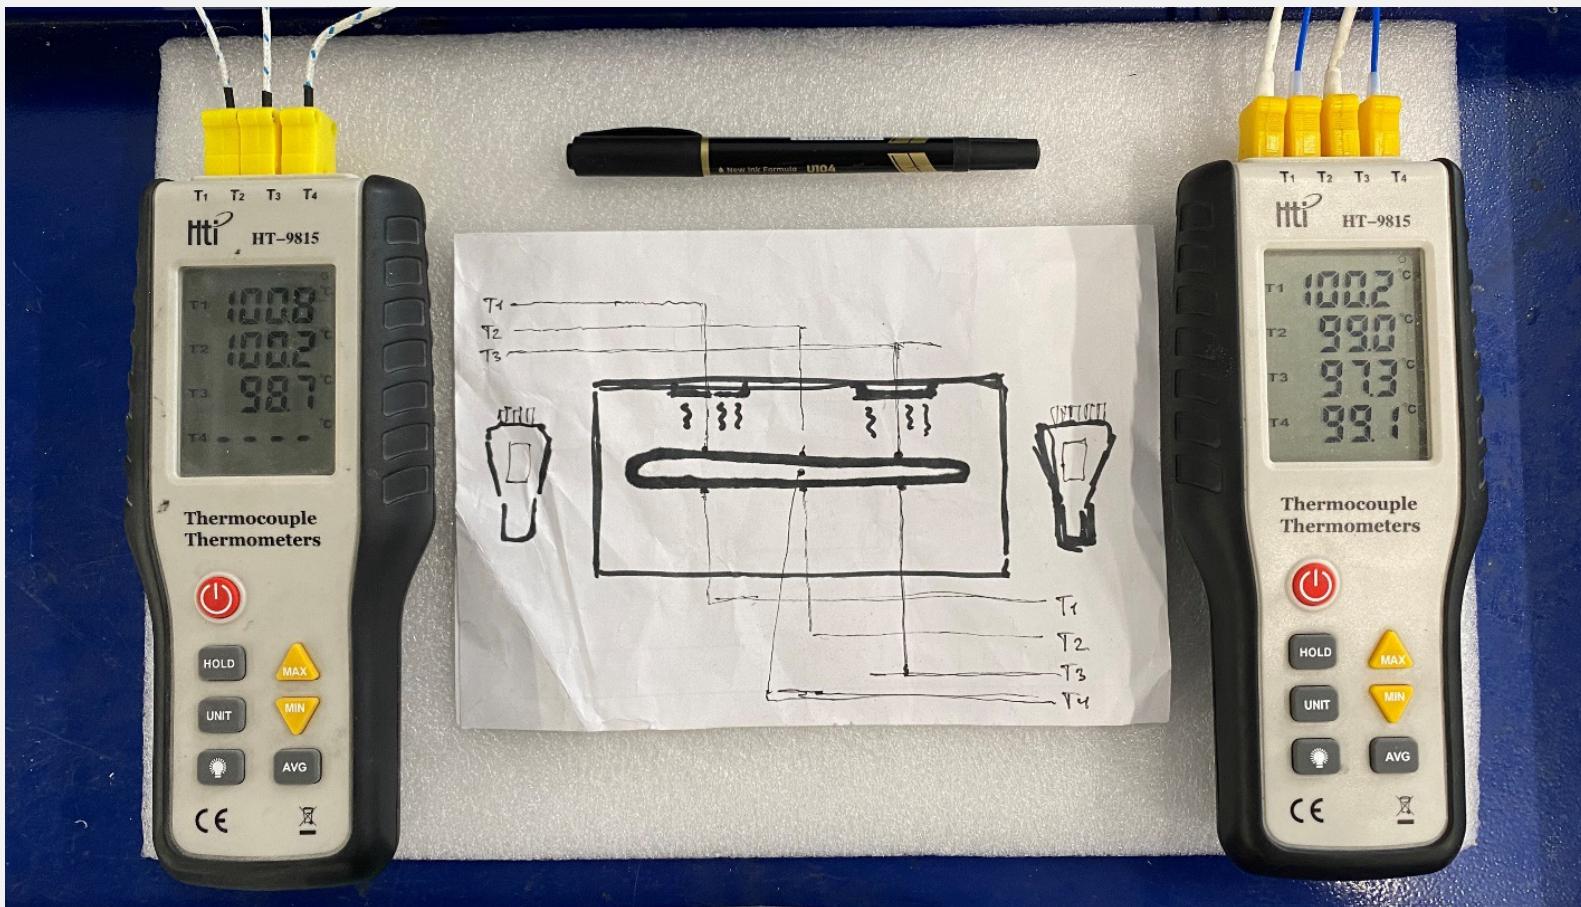

Temperature sensor readings after 60 minutes

Temperature sensor readings 90 minutes

Results: Uniform heating was confirmed across all seven measurement points, demonstrating the oven's high precision and reliability in composite curing.
